

Jinke Li

Academic Curriculum Vitae | September 2026

Neuroimaging AI | Functional Brain Networks | Cross-Subject fMRI Learning

ljinke24@lzu.edu.cn | li337062166@gmail.com

Research with Prof. Yu Fu and Prof. Zhijun Yao

GitHub: github.com/LIJK20

RESEARCH INTERESTS

Cross-subject fMRI representation learning; visual and linguistic brain decoding; functional brain networks; graph-based neuroimaging models; multimodal neuroimaging and interpretable clinical prediction.

EDUCATION

Lanzhou University | M.S. in Computer Science and Technology, 2024-present

School of Information Science and Engineering | Expected June 2027 | Average: 87.88/100

Lanzhou University | B.Eng. in Computer Science and Technology, 2020-2024

Data Science Direction | Average: 88.65/100 | Rank: 6/113

PUBLICATIONS AND ACCEPTED PAPERS

Reconstructing shared visual experiences from human brain activity across individuals

Jinke Li, Yuxiao Yang, Yanyan Huang, Kaiqiang Xu, Yannan Chen, Lequan Yu, Zhijun Yao, and Yu Fu

Medical Image Analysis | 113:104157 | 2026 | Published | First author

DOI: [10.1016/j.media.2026.104157](https://doi.org/10.1016/j.media.2026.104157)

NeuroAlign: A Unified Plug-and-Play Enhancer for Visual and Linguistic Brain Decoding

Jinke Li, Yanyan Huang, Le Xue, Yichi Zhang, Yuchen Liu, Weihao Zheng, Lequan Yu, Zhijun Yao, and Yu Fu

MICCAI 2026 | Accepted | First author

Source-Domain-Invariant Brain Age Estimation with Anatomy-Aware Cross-Representation Attention

Zhigang Wu*, Jinke Li*, Yanyan Huang, Shunjie Dong, Kuangyu Shi, Lequan Yu, Zhijun Yao, and Yu Fu

PRCV 2026 | Accepted | Co-first author

MANUSCRIPTS UNDER REVIEW

Making Better Captions Follow the Brain: Evidence-Accountable Policy Learning for fMRI-to-Language Decoding

Jinke Li, Kaiqiang Xu, Yanyan Huang, Yalin Wang, Lequan Yu, Yannan Chen, Zhijun Yao, and Yu Fu

AAAI 2027 | Under review | First author

Geometry-Preserving Cross-Tissue sMRI Fusion for Multicenter Diagnosis and Severity Stratification of Major Depressive Disorder

Kaiqiang Xu*, Jinke Li*, Jianchao Xi, Zengxing Li, Xinran Yu, Taowen Ren, Yu Fu, and Zhijun Yao

Computerized Medical Imaging and Graphics | Under review | Co-first author

* Equal contribution.

Jinke Li

Research experience, methods, and honors

SELECTED RESEARCH EXPERIENCE

MindShow: Cross-Subject Neuroimaging Representation Learning

Profs. Yu Fu and Zhijun Yao | Medical Image Analysis, 2026

- Led cross-subject fMRI-to-image reconstruction from heterogeneous BOLD data using subject-aware routing and neural-to-CLIP alignment.
- Evaluated shared- and held-out-subject generalization on NSD and adaptation to BOLD5000.

NeuroAlign: Robust Cross-Subject Neural Representation Transfer

Profs. Yu Fu and Zhijun Yao | MICCAI 2026

- Designed geometry-preserving alignment and prototype retrieval for transferable fMRI representations across subjects and decoders.
- Benchmarked visual and linguistic decoding settings, improving cross-subject captioning CIDEr from 55.73 to 62.12.

Making Better Captions Follow the Brain: Evidence-Accountable Policy Learning for fMRI-to-Language Decoding

AAAI 2027 | Under review

- Investigated evidence-accountable policy learning for fMRI-to-language decoding, aligning caption optimization with brain-derived evidence.
- Evaluated multimodal captioning quality and spatial grounding under the BrainHub protocol.

Guangyuan Clinical fMRI: Functional Brain Networks and Brain-State Modeling

Profs. Yu Fu and Zhijun Yao | Co-first-author manuscript in preparation

- Built AAL116 functional connectomes from resting-state fMRI in 135 adolescents and examined depression- and suicidality-related network differences.
- Analyzed rich-club, feeder, and local topology with FDR-controlled edge statistics; compared machine-learning classifiers and interpreted predictive features.
- Designed complementary task-fMRI paradigms with E-Prime, behavioral variables, event coding, and acquisition quality control.

TECHNICAL SKILLS

Functional neuroimaging: Resting- and task-fMRI preprocessing, AAL116 connectomes, rich-club topology, FDR-controlled statistics, and brain-state classification.

Programming and ML: Python, PyTorch, Random Forest, Gradient Boosting, SVM, Logistic Regression, reproducible evaluation, and feature interpretation.

Robust and multimodal learning: Cross-subject alignment, Transformer cross-attention, MoE routing, optimal-transport alignment, CLIP, and diffusion conditioning.

Experimental neuroimaging: E-Prime, stimulus/run organization, behavioral variables, event coding, EEG triggers, and acquisition quality control.

AWARDS AND HONORS

Meritorious Winner, Mathematical Contest in Modeling / Interdisciplinary Contest in Modeling.

Second Prize, National Finals, 7th Global Campus AI Algorithm Elite Competition.

Lanzhou University Scholarships: First Class (2024); Second Class (2021-2023).
